

Dive ladder

DIVE LADDER

Båtsystem is expanding its range of boat ladders by introducing a new dive ladder called DL74.

The compact telescopic dive ladder DL74 is specifically designed for divers climbing with their fins still put on. Its length and width ensures a safe and comfortable boarding. The twin telescopic part smartly folds onto a stern platform when not in use. The four anti-slip safety steps are equally important when using the ladder as a dive ladder or, obviously, as a standard swimming ladder.

The new DL74 ladder is made of SS316 stainless steel and mirror polished for maximum finish. The sturdy twin telescopic tubes fit nicely into each other, having the diameters 38, 32, 25 and 19 millimetres respectively.
